

# Saab 9<sup>3</sup> 2003+ AUX-INPUT Cable

Congratulations! You now have the cable that will enable an external audio source to be connected to your vehicle's stereo.

Any source you plug into this will come out through the vehicle sound system. You can hook up a cell phone (audio out only), an MP3 player, a tape player, audio out from your Palm or Pocket PC organizer, laptop, XM or Sirius satellite radio, or anything else you can think of!

Your package features:

- an aux-in cable featuring designed connectors to properly interface with your stereo for secure fit & shielded cabling for reduced vehicle EM interference,
- cable-ties to secure your cable so it is safe & rattle-free,
- installation instructions for your dealer,

Notes:

- Remember you need a dealer to enable Aux-in in the stereo!
- After everything's hooked up, to cycle through the different sources in your stereo, press the "SRC" button on your steering wheel twice, or press the "DISC" button on the Stereo twice.
- To date, there is no known way of having the Aux-in as the default when you start the car. If you find a way, please let us know!

Happy driving!
