

Saab 9³ 2003+ TEL1 EHU Leads

Congratulations! You now have the cable that will enable you to connect your handsfree cell phone module to your vehicle's stereo.

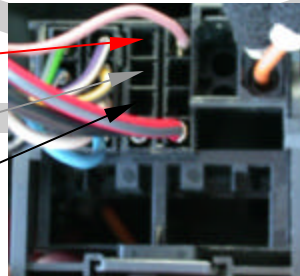

This assumes you have a handsfree unit with leads for audio out & mute. There are no Tech II functions that must be made. Simply plug these leads into the back of the stereo (EHU) and then to your handsfree unit.

Once installed, when a call is received, the vehicle's SID (upper display) will display "**Telephone**" and whatever source was playing (Radio, CD or Aux) will pause & the audio from the phone will be heard. You can then change the volume of the call using the steering wheel volume buttons.

You can find detailed step-by-step installation instructions at:
www.etadyne.com/DIYtel1.htm

Happy driving!

Pin 9 = Audio+ = Red ●
Pin 10 = Audio- = White ●
Pin 11 = Mute = Black ●
